

# **Guidance on Determining Potential Reporting Requirements Under EPA’s TSCA Section 8(a) Rule for Chemical Substances Manufactured or Processed as Nanoscale Materials**

## **40 CFR 704.20**

# **Flowchart**

**This flowchart applies primarily to reporting under 704.20(b)(1), the 3-year “look back” requirement. Entities who may have a reporting obligation under 704.20(b)(2)—proposed manufacture (including import) or processing after the final effective date of the rule—may find the flowchart useful as well.**

**IMPORTANT NOTICE:** The following flowchart is provided as guidance that may assist your organization as it evaluates its reporting obligations. Neither ACC, its Nanotechnology Panel, or any of ACC’s employees, subcontractors, consultants or other assigns makes any warranty, expressed or implied, or assumes any liability or responsibility for any use, or the results of such use, of any information contained in this flowchart. Nothing in this document is intended to constitute legal advice.

**Does your company have a reporting obligation? Small manufacturers and processors (defined for this rule at 704.20(a)) are exempt (see 704.20 (c)(3)).**
